

IMPORTANT!

Please read this before you do anything else!

These scanned images are a 100% accurate size representation of our scratchplates. So you can print them out, and accurately check against your guitar/current scratchplate.

HOWEVER

You need to make sure that you print out your required page at 100% size.

Printed on each page is a 5cm long line. Please check with a ruler that this line is 5cm long after you have printed your required page. If it isn't:

When you go to print your required page (ie under File > Print within your PDF reader): If you are presented with 'Scaling' options to shrink the page to fit your printer, **you must select 'No Scaling'**.

If there is a box where you can choose what %age to print out the page, **you must enter 100%**

If Adobe Reader (dependant on version) offers a selection under 'Size Options', (Fit / Actual size / Shrink oversized pages to fit) **you must choose Actual Size**

How come some of the image is missing?

As the majority of printers are A4, we had to produce an A4 PDF. The size of a strat scratchplate is a smidge bigger than A4, meaning that its not possible to get the entire scratchplate image onto one A4 page. There may be one screw-hole missing in some circumstances, especially as some printers don't print right up to the edge of the page.

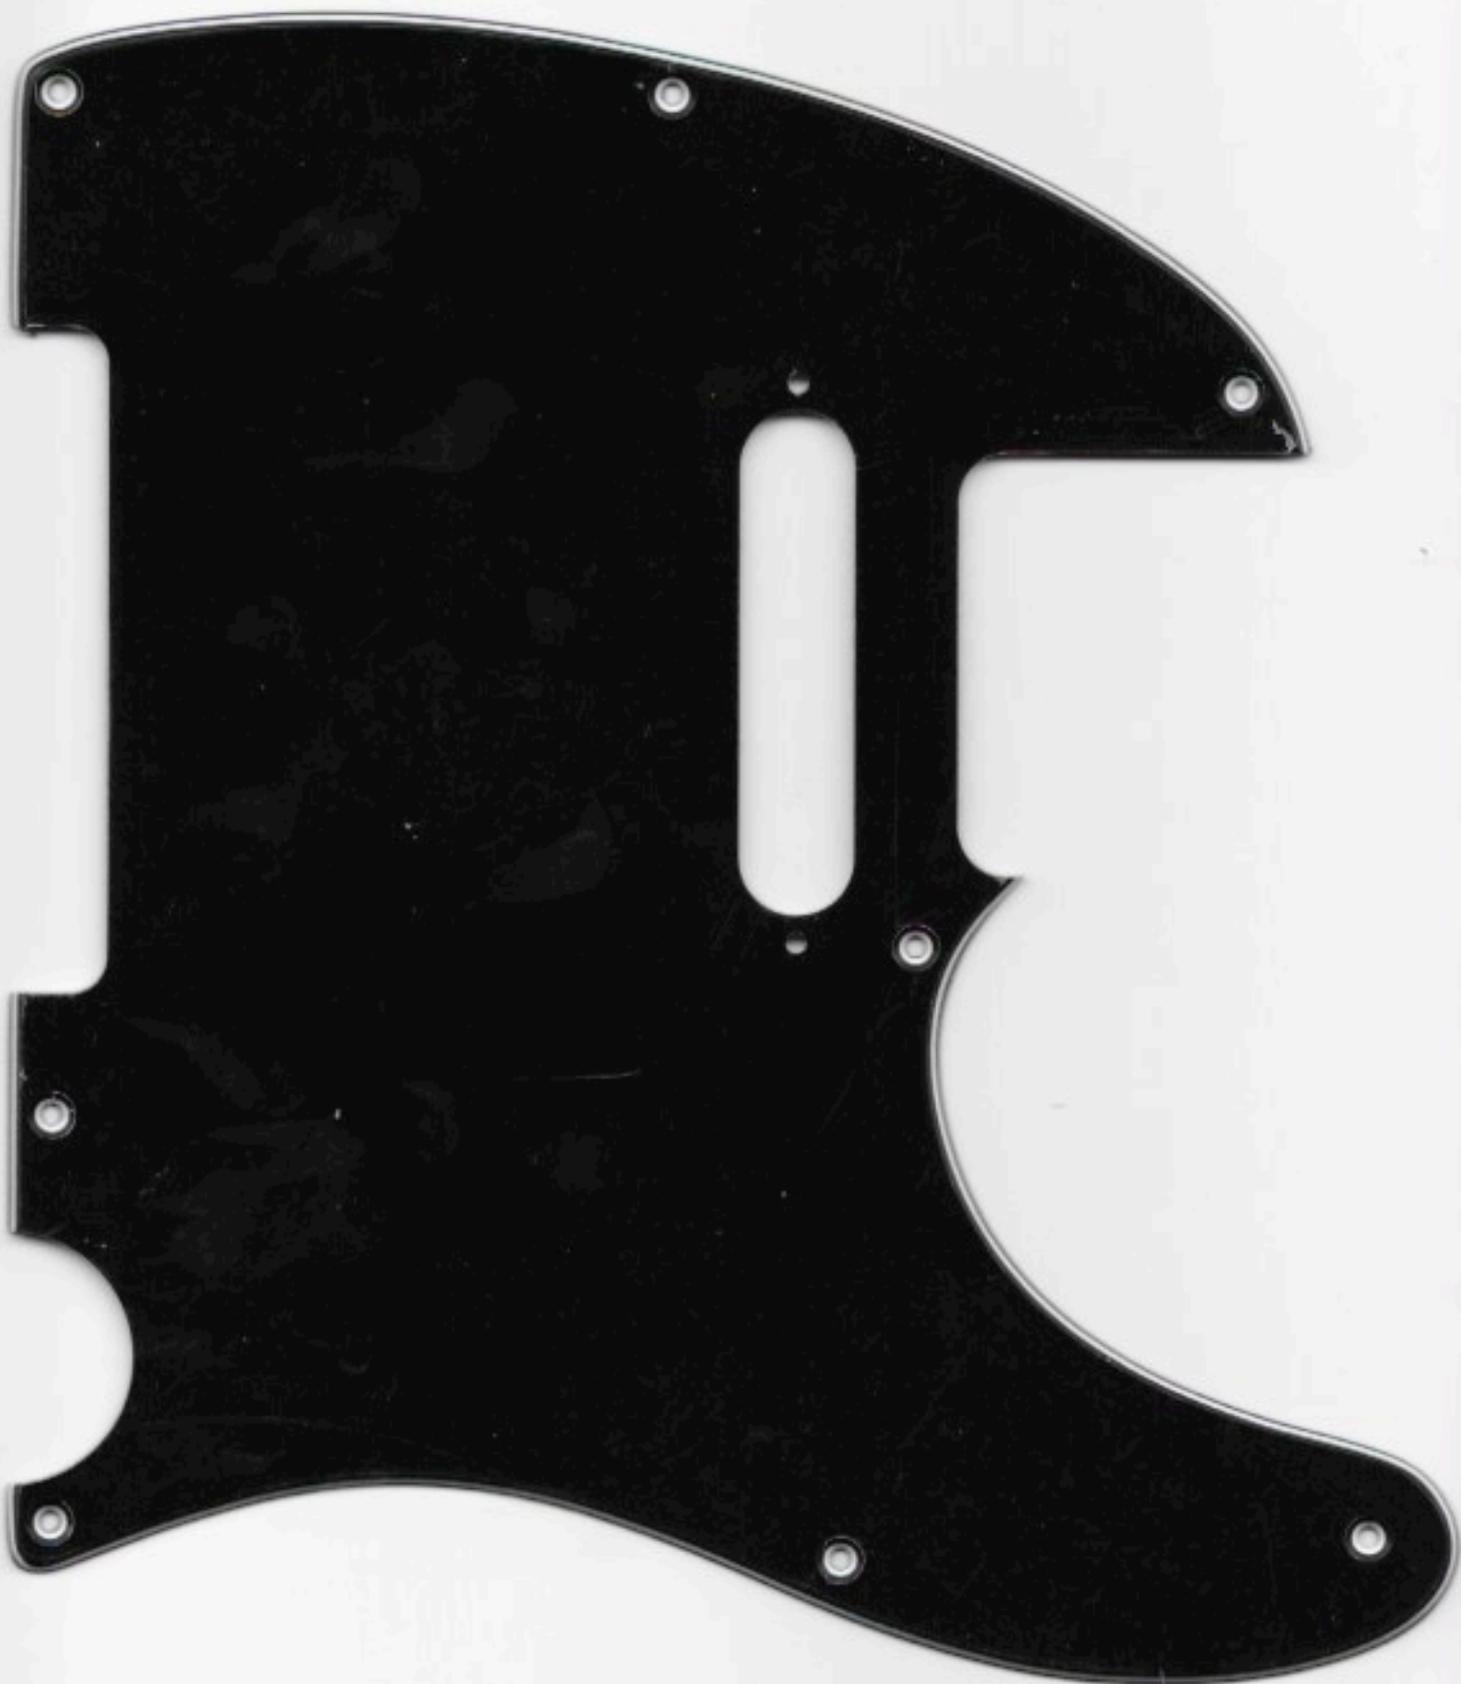

Strat 11 Hole

Strat 8 Hole

Tele 8 Hole

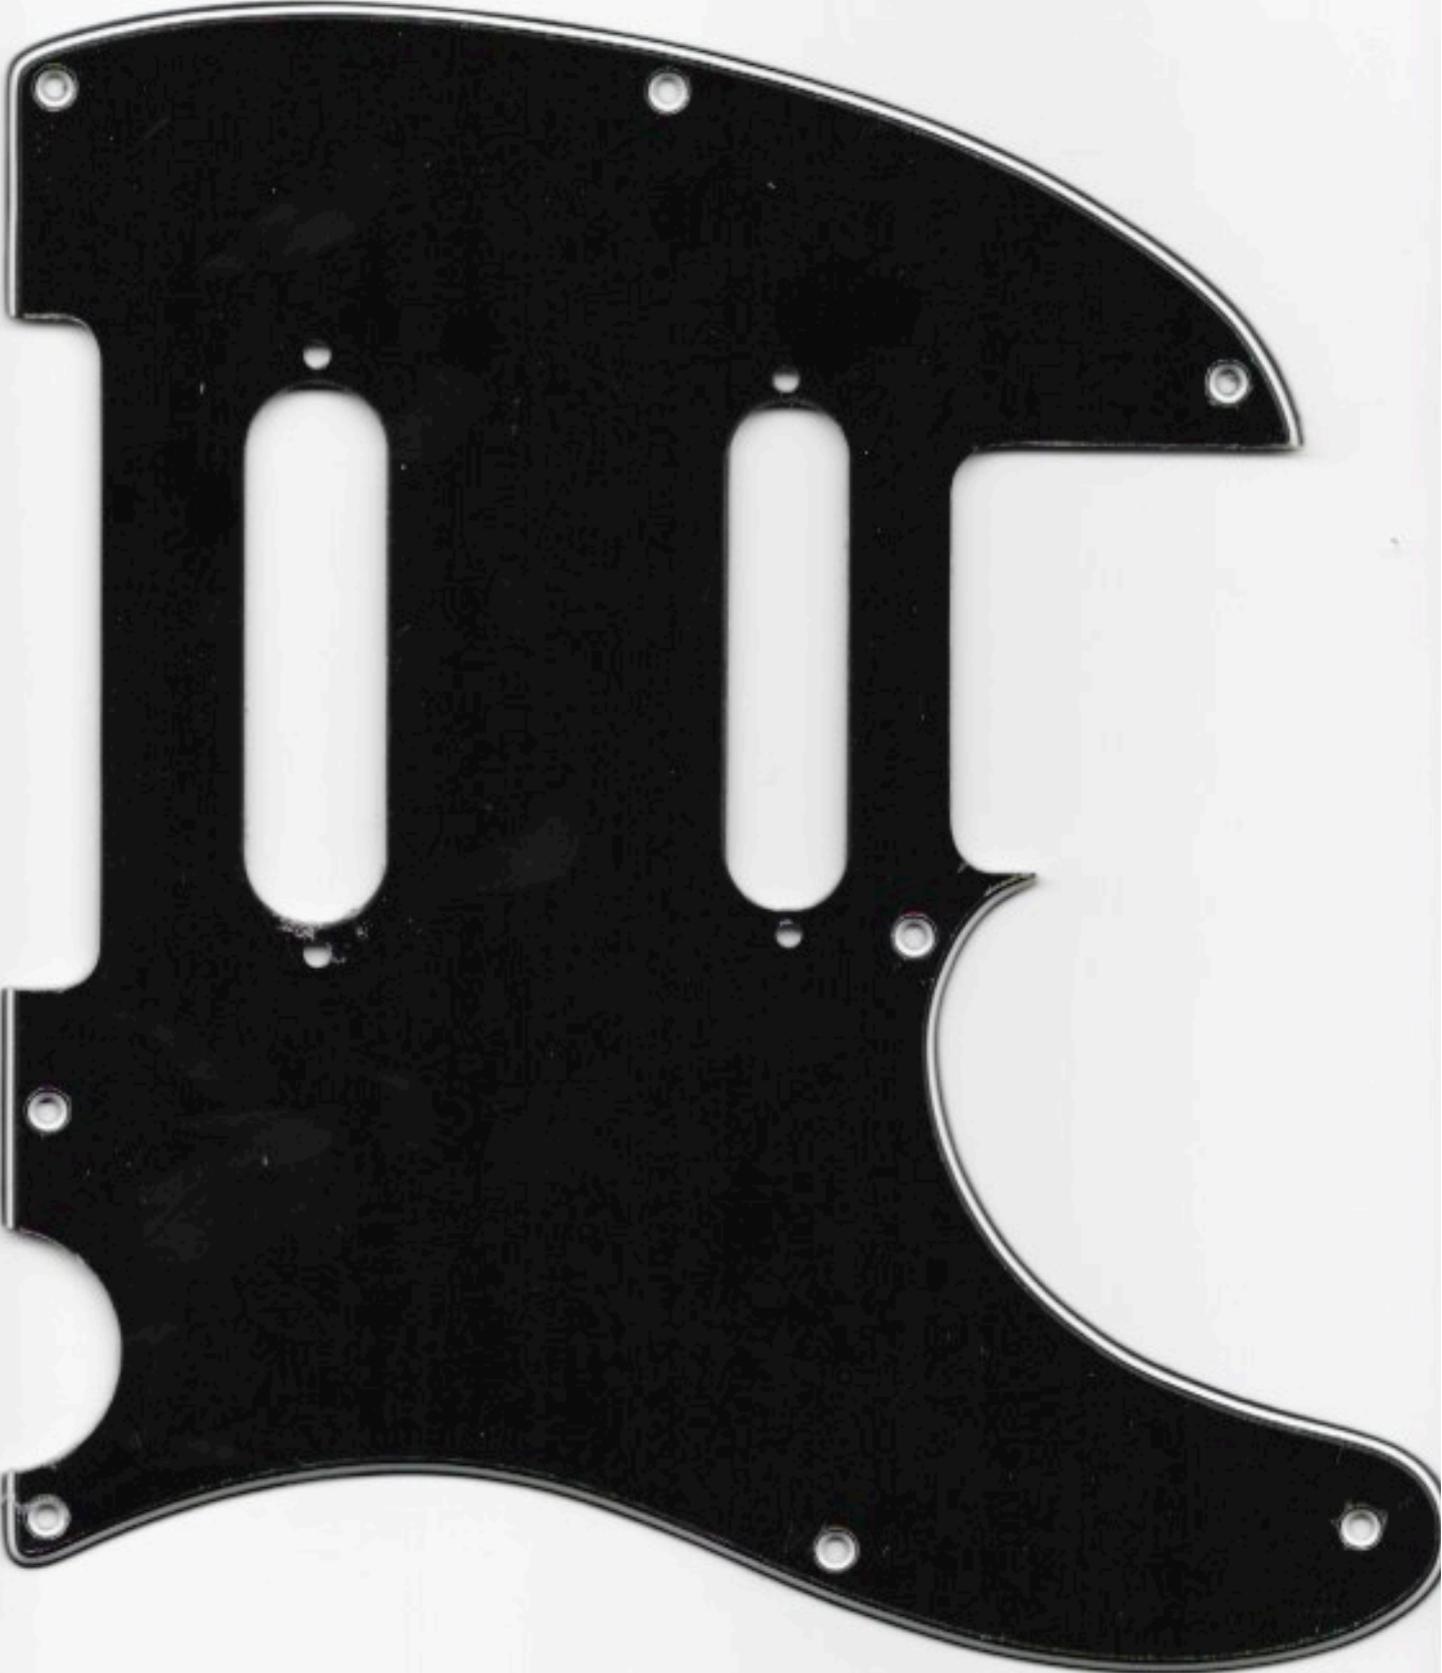

Tele 5 Hole

Tele Humbucker

Nashville Tele

Jazz Bass

SG Special
